Nafa Technologies: Website PRD

Product Requirements Document | Version 1.0 | October 2026

1. Overview

Company: Nafa Technologies is an AI automation agency that helps businesses stop losing leads to missed calls and slow response times. Nafa builds and deploys AI-powered call agents and high-converting websites, fully done for you, with zero fluff. Clients get 24/7 coverage, more booked appointments, and a system that works while they sleep. Nafa works directly with every client: no outsourcing, no middlemen.

Company facts: Founded 2025. Privately held. 2-10 employees. Industry: Technology, Information and Internet. Specialties: AI Automation, AI Call Agents, Web Design, Lead Generation, Appointment Booking.

Tagline: "Never Miss a Lead. Never."

Purpose of the website: Turn local business owners in the United States into booked meetings. The site must explain what Nafa sells in under ten seconds, build trust quickly, and push every visitor toward one action: book a meeting.

2. Goals and Success Metrics

Primary goal: Generate booked discovery calls with qualified local business owners.

Secondary goal: Capture contact details from visitors who are not ready to book, through a free-quote form.

Metric	Target (first 90 days)
Visitor-to-booked-meeting rate	2-4%
Visitor-to-any-conversion rate (booking or form)	5-8%
Form submissions reviewed and responded to	Within 5 minutes during business hours
Average page load (mobile)	Under 2.5 seconds
Lighthouse score (performance, SEO, accessibility)	90+ each

Metric	Target (first 90 days)
Bounce rate on Home	Under 55%

Targets are starting assumptions and should be revised once real traffic data exists.

3. Target Audience

Geography and language: United States, English only.

Primary audience: Owners and managers of local, appointment- or inquiry-driven small businesses, such as home services (HVAC, plumbing, roofing, cleaning), dental and medical clinics, law firms, real estate agencies, salons and spas, auto shops, and similar.

Secondary audience: Other businesses that struggle to find clients, follow up with leads, and close deals.

Visitor pain points (in priority order for messaging):

1. Missed calls: every unanswered call is a customer who calls the next competitor.
2. Slow follow-up: leads go cold if nobody responds within minutes.
3. Not enough leads coming in, and a website that does not convert the traffic it gets.
4. Cost and hassle of hiring a full-time receptionist.

Core promise: Nafa answers every call, responds to every new lead within minutes, and gives you a website that turns visitors into customers, so you win more clients and make more money.

4. Offers (Public Site Scope)

The site presents three main offers only.

4.1 AI Call Agent (Voice Receptionist)

An AI voice receptionist that answers inbound calls 24/7, answers common questions, qualifies callers, and books appointments, with no need to pay a human receptionist.

- Handles inbound calls day and night, including after hours and holidays
- Never puts callers on hold or sends them to voicemail
- Books appointments and captures caller details
- Fully built, tuned, and deployed by Nafa

4.2 Speed-to-Lead Agent

An AI agent that calls a new lead immediately after they submit a form or inquiry. Leads contacted within five minutes are far more likely to connect, so the agent makes the call right away instead of waiting for a human to get to it.

- Triggers instantly when a new lead arrives
- Calls the lead, qualifies them, and books them in
- Works around the clock
- Hands off warm, qualified leads to the business

4.3 AI Website

A modern, high-converting website, fully designed and built by Nafa, with domain and hosting included. Built to turn visitors into calls, forms, and bookings, and designed to plug into the call and lead agents.

4.4 Bundle Messaging

Bundles reward clients who combine offers. The public site shows bundle names and benefits but not prices (see Section 8).

- **Website + Speed-to-Lead:** A new website that captures leads, plus an agent that calls each one instantly.
- **Full Growth System (suggested name, to be confirmed):** Website + Speed-to-Lead + AI Call Agent, so no call and no lead is ever missed.

5. Sitemap and Page Requirements

The site has 14 pages plus a global chat widget. Primary navigation shows seven items; the rest live in the footer.

Primary navigation: Home | Services | How It Works | Case Studies | About | Blog | Contact, with a persistent **Book a Meeting** button on the right.

Footer navigation: FAQ, Pricing and Bundles, Industries, Interactive Demo, Privacy Policy, Terms of Service, Thank You pages.

5.1 Home

Goal: Explain the offer and push visitors to book.

Sections, in order:

1. **Hero:** Headline "Never Miss a Lead. Never." with a subheadline such as "Nafa builds AI call agents and websites that answer every call, follow up with every lead, and book more appointments while you sleep." Primary CTA: **Book a Meeting** (opens Calendly). Secondary CTA: **Get a Free Quote** (scrolls to or opens the form).
2. **Trust strip:** Placeholder client logos (to be replaced with real logos).
3. **The Problem:** Short, punchy stats and statements about missed calls and slow follow-up (for example, the five-minute rule).
4. **The Solution:** Three offer cards (AI Call Agent, Speed-to-Lead, AI Website), each linking to Services.
5. **How It Works:** Three steps: Book a call, We build it for you, You get more clients.
6. **Interactive Demo teaser:** "Hear it for yourself" with a link to the demo page.
7. **Case Studies teaser:** Two or three placeholder result cards.
8. **Testimonials:** Placeholder quotes.
9. **Bundles teaser:** Benefit-led, no prices.
10. **FAQ preview:** Four or five top questions.
11. **Final CTA band:** Book a Meeting, with the free quote form as the secondary option.

5.2 Services (overview)

Overview of all three offers with a one-paragraph description, key benefits, and who each is best for. Each card links to its own detail page. Includes a bundles section and a closing CTA.

5.3 Service Detail Pages (3 pages)

One page each: **AI Call Agent**, **Speed-to-Lead**, **AI Website**. Each page follows the same template:

- Hero with the specific promise and a Book a Meeting CTA
- The problem this solves
- How it works (3-5 steps)
- Features and benefits
- Who it is for
- Example results (placeholder)
- Related FAQs

- Bundle upsell ("Pair it with...")
- Final CTA and free quote form

5.4 How It Works

A simple visual walk-through of the client journey: discovery call, custom build, testing and launch, ongoing support. Reinforces "fully done for you" and "we work directly with every client."

5.5 Pricing and Bundles

Because pricing is **"contact for a quote,"** this page shows no dollar amounts. It presents each offer and each bundle with what is included, who it fits, and a **Get a Custom Quote** button. A short note explains that pricing depends on the business's call volume and lead volume, and that a quick call produces an exact quote.

5.6 Industries (optional but recommended)

A single page with a section per industry (home services, dental/medical, legal, real estate, salons, auto). Each section speaks to that industry's specific missed-call and follow-up pain. This helps local SEO and makes visitors feel understood.

5.7 Case Studies

Grid of case study cards, each linking to a detail page with Challenge, Solution, Results, and a quote. **Launch with clearly marked placeholder content** that is easy to swap for real results as clients come in. Do not publish fabricated results as fact once the site goes live to the public; replace or remove placeholders before launch or label them as examples.

5.8 About

- Founder story and mission
- What Nafa believes: "zero fluff," done-for-you, direct access to the people building your system
- Company facts (founded 2025, small focused team)
- Why local businesses choose Nafa: no outsourcing, no middlemen
- Link to the LinkedIn company page
- CTA to book a meeting

5.9 Blog

Index with category filters and individual post template. Suggested categories: Missed Calls, Lead Follow-Up, Websites, AI for Local Business. Launch with 3-5 starter posts (for example, "The 5-Minute Rule: Why Speed Wins Leads" and "How Much Does a Missed Call Cost Your Business?"). Each post ends with a CTA.

5.10 FAQ

Accordion grouped by topic: General, AI Call Agent, Speed-to-Lead, Website, Pricing and Setup. Sample questions:

- Will the AI sound robotic?
- What happens if the AI cannot answer a question?
- How fast can you get me live?
- Do I need to change my phone number?
- Do I own my website and domain?
- What does it cost? (Answer: depends on your needs; book a call or request a quote.)

Use FAQ structured data for search engines.

5.11 Interactive Demo

Lets visitors experience the product. Options in priority order:

1. A "Call our AI receptionist" phone number with a short explanation
2. An embedded voice demo widget
3. A "Test Speed-to-Lead" form: the visitor enters a name and number and receives an immediate AI call (requires explicit consent and anti-abuse safeguards)

This is a strong differentiator because it lets visitors hear the product.

5.12 Contact

- Calendly embed for booking (primary)
- Free quote form (secondary)
- Business email and phone number, and a link to LinkedIn
- Response-time promise

5.13 Legal Pages

Privacy Policy and Terms of Service. Because the service involves call recording and automated calling, the policy must address call recording disclosure, data handling, and consent for automated or AI-generated calls under US rules (for example, TCPA). Have these reviewed by a qualified attorney before launch.

5.14 Thank You and 404 Pages

- **Thank You (booking):** Confirms the meeting, explains what happens next, and offers a short prep checklist.
- **Thank You (form):** Confirms receipt and promises a response time.
- **404:** Friendly message with links back to Home and Book a Meeting.

5.15 Global Chat Widget

A floating chat widget on every page that answers common questions, explains the offers, and steers visitors toward booking a meeting or leaving their details. It also acts as a live demonstration of Nafa's own technology.

6. Conversion Flows

Primary flow (Book a Meeting): Visitor clicks any **Book a Meeting** button, which opens the Calendly page, they select a time, and then land on the booking Thank You page. Calendly sends confirmation and reminder emails.

Secondary flow (Free Quote): Visitor clicks **Get a Free Quote**, fills in the form (name, business name, email, phone, industry, what they need, optional message), submits, sees the Thank You page, and the lead is delivered to Nafa as a **lead card** (see below), so the team can contact them.

Lead card requirements: Every form submission creates a card containing all submitted fields, timestamp, source page, and referring source, and notifies the team immediately by email. Because Nafa sells speed-to-lead, the site must practice it: target contact within five minutes during business hours.

CTA placement rules:

- Book a Meeting appears in the header on every page, in every hero, and in the final CTA band
- Free quote is always visually secondary (outline or text style button)

- Never more than two CTAs competing in one section

7. Features and Functional Requirements

#	Feature	Priority
1	Calendly embed and booking button	Must have
2	Free quote form with validation and spam protection	Must have
3	Lead card delivery (CRM or dashboard or inbox) plus instant team notification	Must have
4	Responsive design (mobile first)	Must have
5	Sticky header with persistent Book a Meeting button	Must have
6	Chat widget	Must have
7	FAQ accordion	Must have
8	Case study and testimonial templates (placeholder-ready)	Must have
9	Blog with categories	Should have
10	Interactive demo (call line or widget)	Should have
11	Analytics and conversion tracking	Must have
12	SEO tooling (sitemap, meta tags, structured data)	Must have
13	Cookie and consent banner	Should have
14	Industries page	Should have
15	Exit-intent or scroll prompt offering a free quote	Nice to have
16	ROI calculator ("How much are missed calls costing you?")	Nice to have

ROI calculator idea: The visitor enters average job value, missed calls per week, and close rate, and the tool shows estimated monthly revenue lost. Ends with a Book a Meeting CTA. Strong lead magnet, build after launch if time is tight.

8. Pricing and Offer Reference (Internal, Not Public)

The public site uses **"contact for a quote."** Do not show these numbers on the site. They are recorded here so the team can write quote logic, sales scripts, and bundle descriptions consistently.

Offer	Upfront	Recurring
Speed-to-Lead	$999	$399/month for up to 750 leads contacted
AI Website (domain and hosting included)	$599 one-time	None
AI Call Agent	$1,999	$250-$400/month, depending on usage

Bundle	Price
Website + Speed-to-Lead	$499 (website) + $899 (Speed-to-Lead upfront)

Notes:

- Your notes also list bundles that include the AI chat agent and website redesign. Those fall outside the three main offers, so they are left out of the public scope. Add them later if you decide to promote them.
- Confirm whether the $499 + $899 bundle figures are upfront prices only, and whether the monthly Speed-to-Lead fee still applies on top.

9. Design Requirements

Vibe: Friendly and approachable, with a clean, corporate, professional look.

Brand assets (from provided files):

- **Logo:** The "Nafa Technologies" wordmark with angle brackets (code-style < >) on a warm off-white background. Use as supplied, keep clear space around it, and do not distort or recolor it.
- **Primary headline style:** Bold black sans-serif with a gold accent word, as in the "Never Miss a Lead. Never." banner.

- **Palette (derived from the supplied images):** Near-black text, warm off-white/cream background, and a gold/tan accent for emphasis, short divider lines, and buttons. Exact hex values to be sampled from the original logo files.
- **Typography:** A modern geometric sans-serif matching the logo's typeface (bold for headlines, regular for body). Confirm the exact font name, or use a close match.

Design principles:

- Generous white space and a clean grid
- One accent color (gold) used sparingly for emphasis and CTAs
- Short, plain-language copy with no jargon ("zero fluff")
- Real, human, approachable tone, not cold or overly techy
- Consistent card, button, and section styles across pages
- Accessible contrast (WCAG AA minimum): check gold text on cream backgrounds, and use black text on gold buttons where needed
- Subtle motion only (fade-ins, hover states); nothing that slows the page

Imagery: Clean illustrations or product visuals of calls, chat, and dashboards. Avoid generic robot stock photos. Use real photos of the founder(s) on the About page when available.

10. Content and Credibility Plan

Current state: No client logos, testimonials, or case studies yet.

Launch plan:

- Use placeholder client logos, testimonials, and case studies built into reusable components, so real content drops in with no redesign
- Mark placeholder content internally in the design files so none is forgotten
- **Before public launch:** replace or remove placeholder testimonials and results, or label them clearly as illustrative examples. Presenting invented clients, quotes, or results as real can mislead visitors and create legal risk (FTC rules on endorsements and testimonials).

Credibility without clients:

- Founder story and the "no outsourcing, no middlemen" promise
- A live interactive demo (the product proves itself)

- Clear process and guarantees (for example, a free setup review or trial period, if you decide to offer one)
- The chat widget and website itself as proof of capability
- Early-client offer in exchange for a testimonial and case study

11. Technical Requirements

Hosting and domain: To be confirmed (domain and hosting status not yet decided). Recommended: a fast managed host with SSL, automatic backups, and a CDN.

Build approach: To be decided. Either a no-code or low-code builder (fast to launch and easy to edit) or custom code (more control). Requirement either way: non-technical team members can edit copy, add blog posts, and swap case studies without a developer.

Integrations (launch):

- **Calendly:** booking embed and links (primary CTA)
- **Chat widget:** floating widget on all pages
- **Form handling:** with lead delivery and instant team notification
- **Analytics:** Google Analytics 4 with conversion events for booking clicks, form submissions, and demo interactions

Integrations (later): CRM, email marketing, and payment processing are skipped for now.

Performance and quality:

- Mobile first, tested on current iOS and Android browsers and the latest desktop browsers
- Compressed images, lazy loading, minimal scripts
- HTTPS, spam protection on forms, and basic security headers
- WCAG 2.1 AA accessibility

12. SEO Requirements

- Unique title tag, meta description, and one H1 per page
- Clean URL structure (for example, /services/ai-call-agent)
- XML sitemap and robots.txt, submitted to Google Search Console
- Structured data: Organization, FAQ, Article (blog), and Service

- Local and industry keywords throughout (for example, "AI receptionist for dental offices," "missed call text back," "speed to lead for contractors")
- Blog plan targeting questions local business owners search for
- Alt text on all images, descriptive link text, and internal linking between services, industries, and blog posts

13. Analytics and Tracking

- Page views, traffic sources, and device split
- Conversion events: Calendly button click, booking completed (if available through the Calendly integration), form submitted, demo started, chat started
- Funnel: Home to Services to Contact to Booked
- Monthly review of top pages, drop-off points, and conversion rate, with iterative CTA and copy tests

14. Compliance and Risk Notes

- **Call recording and AI disclosure:** The demo and the products involve recorded or AI-handled calls. Include clear disclosures, and confirm state-by-state recording consent rules with an attorney.
- **Automated outbound calls (TCPA):** The "Test Speed-to-Lead" demo and the Speed-to-Lead product involve automated calls. Require express consent on forms, and add opt-out handling.
- **Testimonials and claims:** Do not publish unverified performance claims. Back statistics with a source.
- **Privacy:** Disclose data collected by forms, chat, analytics, and cookies.

15. Launch Plan and Phases

Phase 1: Foundation Finalize brand assets, sitemap, copy outline, Calendly link, and domain and hosting decision.

Phase 2: Design Wireframes for Home, a service detail page, and Contact; then the visual design system (colors, type, components); then full page designs.

Phase 3: Build Build the page templates, forms, Calendly integration, chat widget, and analytics. Add placeholder content for logos, testimonials, and case studies.

Phase 4: Content Write final copy for all pages, 3-5 starter blog posts, FAQ answers, and legal pages (attorney reviewed).

Phase 5: QA and launch Test on devices and browsers, test every form and booking flow end to end, check page speed and accessibility, verify tracking, replace or label placeholders, and go live.

Phase 6: Post-launch Add real client logos, testimonials, and case studies as they arrive. Publish blog posts regularly. Review analytics monthly and optimize.

Timeline and budget: Not set. To be defined by the Nafa team.

16. Open Questions

1. Final domain name, and is it already purchased?
2. Which builder or stack will be used?
3. Which chat widget and voice demo tool will power the site?
4. Where should lead cards go (email, CRM, spreadsheet, or dashboard)?
5. Do you want to offer a guarantee, free trial, or free audit to lower the barrier to booking?
6. Confirm bundle pricing structure and whether monthly fees apply on top of the bundle prices.
7. Will you add the AI chat agent and website redesign to the public site later?
8. Founder names, photos, and bios for the About page.
9. Exact brand hex colors and font name from the original logo files.
10. Business phone number and email to show on the site.

17. Out of Scope for Launch

- Public pricing
- Client login or dashboard
- Careers page
- Multi-language support
- Payment processing and email marketing integrations
- AI SEO and WhatsApp services
